

Creating Digital Case Studies

Workshop

Dr. Robert Treharne

R.Treharne@liverpool.ac.uk

Session Roadmap

1. Example, assignment requirements, and assessment weighting
2. AI guidance and platform choices
3. 4-part structure for a strong case study
4. Individual and pair activities
5. Common pitfalls, recap, and checklist

What students submit

- A **3-minute digital case study**
- A **500-word reflective commentary**
- **AutoViva transcript**

Assessment Breakdown

- This assessment is worth **60%** of the module
- **Digital artefact (video): 80%**
- **Reflective commentary: 20%**
- **Submission Deadline: Week 13 - 15th May**
- [View Assessment Rubric](#)

Examples and Delivery

- [YouTube Playlist](#)

Choose a Topic

- Vaccines, Therapeutics and Antimicrobial Resistance (AMR)
- Public Engagement in Science / Science Communication
- Health Inequality
- Threats to Biodiversity
- Climate Change and Global Food Security
- Sustainable Education Provision (Equity, Access, Continuity)
- Artificial Intelligence for Sustainable Innovation

Choose an Audience

- Parents of young children
- Teenagers (13-18)
- University students (non-science background)
- Primary or secondary school students
- Patients with a specific condition (e.g. diabetes)
- People making lifestyle choices (diet, exercise)
- Local communities
- Consumers interested in sustainability
- Policymakers (non-scientific background)
- Any other, as long as you justify it

Your audience must be specific enough that you can picture a real person.

Allowed

- Brainstorming ideas
- Drafting script options
- Generating visuals

Not allowed

- Writing the reflection
- Fake or shallow justification
- Replacing understanding
- Generated voiceovers or synthetic narration

Platforms (Any Is Fine)

- Canva
- CapCut
- PowerPoint
- iMovie
- Powtoon
- Any equivalent free tool

The tool does not matter. Clarity does.

You must learn your chosen tool yourself. We will not provide platform tutorials or guidance as part of this workshop.

Don't subscribe! Watermarks are fine, free versions are fine, no marks for polish alone.

The 4-Part Flow

1. **Hook** - Why should I care?
2. **Explain** - What is the issue?
3. **Solution** - What can be done?
4. **Takeaway** - What should the audience think or do?

Structure is your safety net.

Mini Task (2-3 min)

Example topic

Climate change and food security

Quick prompt

- What is your **hook**?
- What is your **takeaway**?

Keep it simple: one sentence each.

Individual Activity (50-70 min)

Students work independently to:

1. Choose a topic (from handbook)
2. Define a specific non-technical audience
3. Sketch:
 - Hook idea
 - Main message

Test: Could your audience understand this in one viewing?

Pair Activity (5-7 min)

Explain to a partner:

- Your topic
- Your audience
- Your core idea

Partner asks:

"Would I understand this?"

Common Pitfalls

- **No audience**
"General public" is usually too vague
- **No structure**
Feels like disconnected facts
- **Overuse of AI**
Sounds polished but lacks depth

Fix all three by defining audience + using the 4-part flow.
