

BIOS776/676 Digital Case Study (60%) Rubric

Component	Fail (<45%)	Marginal Fail (45–49%)	Pass (50–59%)	Merit (60–69%)	Distinction (≥70%)
Reflection (20%)	Absent or seriously flawed reflection. No coherent evaluation of design decisions. No AutoViva transcript submitted.	Limited and largely descriptive reflection. Weak alignment between intentions and final product. Minimal critical evaluation. AutoViva transcript missing or incomplete.	Clear and structured reflection demonstrating understanding of design decisions and audience. Some evaluation of strengths and limitations. Engagement with literature evident but limited in depth. Complete AutoViva transcript submitted.	Systematic and critical reflection demonstrating informed judgement. Clear alignment between design theory, audience and implementation. Well-integrated academic references. Evidence of iterative refinement. Complete AutoViva transcript submitted.	Sophisticated, critically evaluative reflection demonstrating advanced theory-informed practice, originality and intellectual independence. Explicit accessibility and professional considerations. Complete AutoViva transcript submitted.
Content (40%)	Inadequate or largely irrelevant content. Major conceptual errors. No meaningful consideration of audience. No engagement with peer-reviewed literature.	Limited coverage with significant omissions or inaccuracies. Weak audience targeting. Minimal or inappropriate engagement with peer-reviewed literature. No clear appraisal of viability.	Accurate coverage of core issues with clear structure and audience awareness. Engagement with relevant peer-reviewed literature. Some appraisal of viability, though evaluation may lack depth.	Comprehensive, analytical coverage demonstrating systematic understanding. Clear audience targeting. Critical engagement with peer-reviewed literature to justify design decisions and evaluate viability. Effective integration of multimedia.	Authoritative and critically informed coverage demonstrating advanced conceptual understanding. Excellent synthesis of theory, empirical evidence and practice. Clear appraisal of viability and limitations grounded in high-quality peer-reviewed literature. No substantive errors.
Design (40%)	Design prevents	Basic structure but	Clear and functional	Consistent and	Exceptionally well

	effective communication. Major usability, structural or technical issues.	limited coherence, weak hierarchy or inconsistent presentation. Design does not effectively support communication.	design with logical structure and readable layout. Appropriate hierarchy and navigation. Multimedia largely effective and correctly attributed.	purposeful design demonstrating strong understanding of digital communication principles. Effective hierarchy and visual coherence. Design enhances meaning and engagement.	executed, professional-standard design demonstrating originality and creative judgement. Sophisticated hierarchy, usability and accessibility-informed thinking. Seamless multimedia integration. No apparent design flaws.
