

School of Biosciences
Assessment Scrutiny Template for assessments.

If your assessment is an ONLINE TEST, this form does not need to be completed.
Please complete your questions and answers on a separate document.

General Information

Module Code and Name	BIOS776/676
Module organiser	Raheela Awais
Marker (s) Please provide marker per question if there are multiple tasks	Raheela Awais and Rob Treharne and may be Stephen Chapman
Moderator(s)	Not sure
Assessment Deadline	Week 12
Assessment Weighting	60%
If your weighting differs from the usual Cyclical Weighting structure (C1- 40 %, C2 60%) please provide relevant information and rationale: Does not differ.	

PLEASE COMPLETE THE **FIRST SIT** AND **RESIT** SECTIONS BELOW

FIRST SIT ASSESSMENT

Task Scrutiny

Nature of Assessment	Digital Case study
If more than a single task, please clarify instructions (e.g choice of 2 questions)	The Cyle 2 assessment is a 1. A short digital case study presentation (e.g. 3-5 minute produced video and naration) explaining a current global issue faced in the Biosciences and offering potential solution(s) on a global challenge of your choice. 2. As part of the same assessment submit a 500 word reflective commentary, to critically reflect on your design in relation to accessibility and clear messaging. The commentary should include the transcript from the AutoViva tool.
Maximum Word Count (UG Standard- Cycle 1:1000, Cycle 2: 1500)	Link to the video and a 500 word reflective commentary. AutoViva transcript not included in word count.
SoLS Standard Rubric Y/N	No
If non standard rubric please rationale for use.	The standard essay or poster rubric does not apply to this assessment which is based on digital content.
Confirmation that rubric is attached (please provide the rubric, whether it is a standard rubric or not)	Yes
Confirmation SoLS AI Guidance has been read	Yes

Please summarise how this assessment has been designed to address the issue of AI/Chat GPT as per the guidance:

This assessment has been designed to accommodate appropriate use of generative AI while safeguarding the assessment of independent critical thinking.

Students may use generative AI tools to support planning and production of their digital case study content, reflecting contemporary professional practice. All AI use must be declared in line with institutional policy.

However, the reflective component must be written independently and must not be generated by AI. Reflection assesses students' critical evaluation, theoretical understanding, and justification of design decisions, including appraisal of viability through engagement with peer-reviewed literature. Submission of an AutoViva transcript provides an additional verification layer, requiring students to articulate and defend their decisions.

By separating artefact production from critical reflection, the assessment ensures that higher-order skills, intellectual ownership and Level 7 critical judgement remain robustly evaluated while permitting responsible AI use.

Please include Question below. (Please copy and paste the question text rather than using an image/text box)

Context of the task:

The aim of this task is to develop your ability to communicate complex scientific concepts and global challenges to a broad, non-technical audience using digital media. Effective digital communication requires clarity, audience awareness, design judgement, and evidence-informed decision making.

This assessment requires not only effective communication but also critical evaluation of design choices, theoretical grounding, and appraisal of the viability and appropriateness of your chosen solution.

What is assessed?

1. **A digital case study** presented as a video of no more than 3 minutes. The video must communicate a global challenge of your choosing to a clearly defined non-technical audience. It should demonstrate purposeful structure, effective digital design, and audience awareness.

2. **A 500-word critical reflective commentary.**

This must:

- Justify your design decisions
- Define and justify your intended target audience
- Critically appraise the viability and suitability of your chosen digital approach
- Demonstrate engagement with relevant peer-reviewed literature
- Include a properly formatted reference list

- Include a hyperlink to the published video at the top
- You must include a complete transcript from the AutoViva tool in which you justify and defend your design decisions.

Students may use generative AI tools to support planning, scripting, or production of the video artefact. However, the reflective commentary must be written independently and must not be generated using AI. All AI use must be declared in line with institutional policy.

Platform access and subscriptions

The University will not provide paid subscriptions for external digital platforms. Students are expected to use free versions of tools where possible.

You will not be penalised for platform limitations such as watermarks, restricted image libraries, limited export quality, or similar constraints associated with free-tier functionality. Assessment focuses on clarity of communication, design thinking, audience awareness, and critical reflection — not on access to premium software features.

How to do it

Decide how you will produce your 3-minute video and familiarise yourself with the tool. You may use platforms such as:

- Canva
- Adobe Express
- Powtoon
- iMovie
- CapCut
- Premiere Pro

or any equivalent platform appropriate to your design rationale.

Publish your video (e.g. unlisted YouTube, Vimeo, LinkedIn, or equivalent platform suitable for your defined audience).

Submit your 500-word reflective commentary, including your AutoViva transcript, to Canvas before the deadline.

Include a hyperlink to your published video at the top of the document.

Please include Model Answer below. Model Answer should not be shared with students. (Please copy and paste the question text rather than using an image/text box)

There is no model answer for this assessment.

Expectations that inform marking criteria, please adapt to your assessment. This will be published to students.
